

The Sustainability Cloud (TSC)

Go-To-Market Strategy — India, 2026

GTM STRATEGY DASHBOARD

Project Summary Note

This note accompanies the Power BI dashboard submitted for review. It explains the business context, the structure of the dashboard, and the key insights each page is designed to communicate.

1. Background & Context

Indian companies across the services sector are facing growing pressure from regulators, investors, and customers to move beyond reporting their environmental footprint and start actively reducing it. Mandatory disclosure norms such as BRSR, evolving SEBI requirements, and global frameworks like SBTi, CDP, and CBAM are pushing large enterprises to measure and manage their carbon emissions, energy consumption, and water usage with the same rigour they apply to financial metrics.

This shift is creating a significant market opportunity for sustainability technology providers. The Sustainability Cloud (TSC) is positioned to capture this opportunity through a focused, integrated software offering.

2. About TSC & Its Product Suite

TSC offers three complementary products that together form a single platform for managing an organisation's environmental performance:

Product	What It Does
TSC Net Zero	Tracks carbon emissions across an organisation's operations and value chain, and builds a roadmap towards decarbonisation and Net Zero targets.
TSC Energy	Identifies opportunities for energy optimisation across facilities and operations, helping organisations reduce consumption and cost.
TSC Water Offset	Monitors water usage and supports water stewardship initiatives, helping organisations move towards water-positive operations.

Together, these three products allow TSC to position itself not merely as a software vendor, but as an integrated sustainability transformation partner — a key differentiator from point-solution competitors in the market.

3. Objective of This Exercise

TSC's GTM strategy document lays out a detailed plan covering target industries, priority companies, product-market fit, key stakeholders, competitive positioning, and a 90-day execution roadmap. While the content of this strategy is comprehensive, it is presented largely in narrative and tabular form, which makes it difficult to absorb at a glance.

The objective of this exercise was to translate that strategy document into a structured, visual, and interactive Power BI dashboard — one that allows a reader to grasp the entire go-to-market plan quickly, while still being able to explore the underlying detail through filters and tables.

4. Dashboard Structure: A Five-Page Narrative

The dashboard is organised as five pages that follow a single, logical storyline — moving from the overall picture, to where TSC should focus, what it should sell, who it should engage, and finally how the plan will be executed.

Page	Guiding Question	What It Covers
1. Executive Overview	What is this strategy about?	Headline numbers (target industries, companies, timeline, early wins), an executive summary, the TSC product suite, and the overall strategic thesis.
2. Industry & Market Analysis	Where should TSC focus?	A colour-coded industry prioritisation matrix comparing IT & ITES, BFSI and Healthcare; a list of target companies by industry; and the key sustainability pain points facing each sector.
3. Product Strategy & Competition	What should TSC sell, and to whom?	Product-market fit across industries, a comparison of TSC against key competitors, and the reasons TSC is positioned to win.
4. Stakeholder & Regulatory Landscape	Who should TSC engage, and why now?	A stakeholder priority map identifying the key decision-makers within target companies, alongside the Indian and global regulations creating urgency for action.
5. 90-Day GTM Execution Plan	How and when will this be executed?	A phase-wise breakdown of the 90-day plan (Foundation, Engagement, Conversion) with associated KPIs and key activities for each phase.

5. Page-by-Page Walkthrough

Page 1 — Executive Overview

This page sets the stage. Four headline figures — 3 target industries, 50 target companies, a 90-day GTM timeline, and 2-3 early wins — give an immediate sense of scale and ambition. The executive summary clarifies the target market (the services sector), the priority industries, the key drivers (Net Zero, ESG, Energy), and the key decision-makers to be engaged (CFO, CSO, ESG Head). The TSC product suite is summarised alongside a short strategic thesis explaining why TSC is well placed to act as a transformation partner rather than just a vendor.

Page 2 — Industry & Market Analysis

This page answers the question of where TSC should focus first. An eight-criteria prioritisation matrix compares IT & ITES, BFSI, and Healthcare on factors such as ESG maturity, regulatory pressure, spending capacity, and ease of entry, with colour coding (green for strong, amber for moderate, grey for weak) making the comparison immediately readable. The analysis shows IT & ITES as the strongest near-term opportunity. Below the matrix, target companies are grouped by industry, and a set of pain-point cards highlights the specific sustainability challenges each sector is grappling with — from data-centre energy use in IT, to regulatory disclosure pressure in BFSI, to water and energy intensity in Healthcare.

Page 3 — Product Strategy & Competition

This page answers what TSC should sell, and to whom. A product-market fit view maps TSC Net Zero, TSC Energy, and TSC Water Offset against each target industry, showing where each product is the strongest fit. A competitive landscape table benchmarks TSC against established players such as Persefoni, IBM Envizi, Salesforce Net Zero Cloud, and energy/water specialists like Schneider Electric and Honeywell. The page concludes with a 'Why TSC Wins' section, highlighting TSC's integrated platform, India-specific focus, and partner-led approach as its core differentiators.

Page 4 — Stakeholder & Regulatory Landscape

This page answers who TSC should engage, and why the timing is right. A stakeholder priority map ranks roles such as CFO, CSO, and ESG Head as the highest-priority contacts, with Facilities, Procurement, and Operations leaders as supporting stakeholders. Alongside this, a regulatory landscape table lists the Indian regulations (such as BRSR and SEBI requirements) and global frameworks (such as SBTi, CDP, CBAM, and the GHG Protocol) that are creating urgency for companies to act — effectively turning compliance pressure into a sales trigger for TSC.

Page 5 — 90-Day GTM Execution Plan

This page answers how and when the plan will be executed. The 90 days are broken into three colour-coded phases: Foundation (Days 0-30, focused on building a pipeline of 50 target companies and 100 key contacts), Engagement (Days 31-60, focused on meetings, workshops, and proposals), and Conversion (Days 61-90, focused on launching pilots and securing 2-3 early reference wins). A KPI table consolidates all the numerical targets across phases, and a key activities view details the specific actions planned for each stage.

6. Key Strategic Takeaways

- IT & ITES emerges as the highest-priority vertical, combining strong ESG maturity, healthy budgets, and an easier path to entry compared to BFSI and Healthcare.
- The CFO, CSO, and ESG Head form the primary 'buying triangle' within target companies — engagement strategy should prioritise reaching these three roles.
- TSC's integrated three-in-one offering (carbon, energy, and water) is a clear differentiator against competitors who typically address only one of these areas.
- Tightening regulations (BRSR, SBTi, CBAM and similar frameworks) are converting sustainability from a reporting exercise into an operational necessity, creating a natural trigger for TSC's offering.
- The 90-day plan is designed to convert this opportunity into 2-3 early reference customers, which can then be used to build credibility for the next phase of expansion.

7. Closing Note

The accompanying Power BI dashboard brings the above narrative to life through five pages. Three of these — Industry & Market Analysis, Product Strategy & Competition, and the 90-Day GTM Execution Plan — include filters that let the reader explore the data by industry or by execution phase. Together, the dashboard and this note are intended to give a complete, at-a-glance view of TSC's go-to-market strategy for the Indian services sector — covering the rationale, the target market, the product positioning, the people to engage, and the plan of action.

Feedback and suggestions for refinement are welcome.
